

MediCiti Hospitals

We have prepared
this pamphlet for
the women of
Medchal Mandal.

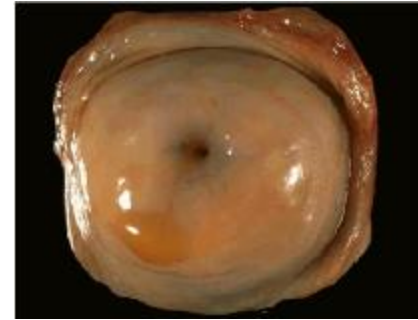

We would like to
tell you about a
serious
reproductive
disease.

To carry babies, women have a hollow body part called the womb. At the lower part is the cervix, which is followed by the vaginal canal, leading to the outside of the body.

Married women may develop a number of infections of the womb and cervix. A particular type of infection of the cervix can lead to severe cervical disease, and may even result in death. This infection has several stages. It is easily treatable if it is caught early by tests. Thus, it has become Medicity's goal to provide FREE testing and treatment to all of the women in Medchal Mandal over the age of 30. To be tested, the doctor will ask you to lie down so that she can examine your cervix.

Healthy Cervix

Cervix with severe disease
(patient may have no symptoms)

We are offering several FREE tests that will assist us in identifying cervical infection. You might be infected without feeling sick. Our tests are designed to identify women with infections in order to prevent sickness. Being tested can save your life and allow you to care for your family.

Your examination and testing is the best treatment available. It is of the same quality as that in the U.S.

After your visit, we will provide you with a report of your test results after 3 weeks. Your test results will be positive or negative for infection. If your tests are NEGATIVE we will ask to see you after five years. If your tests are POSITIVE we will ask you to return for more tests and treatment. The infection progresses slowly and with many steps. Therefore it is important take the advice of the MediciTi doctors and return for FREE treatment. This will help you avoid severe cervical disease.

15000 Report Form for Cervical Smear Observation
